Northwest Fires Utilizing Monitor, Confine, Point Zone Protection Suppression Strategies (YTD) (link)

Lists fires (of any size) that singly utilize Monitor, Confine or Point Zone Protection suppression strategies, or use Multiple Suppression Strategies (which may also include a Full Suppression component).

Northwest Fire Potential Summary

A weak shortwave is flattening the high pressure that has been over the region bringing cooler conditions today with breezy winds in the Okanogan Valley and Cascade gaps. Weak high pressure will return Wednesday and Thursday before a strong low pressure trough starts affecting the region bringing substantial cooling Thursday night and through the weekend. Chances of precipitation start out low on Friday, but increase over the weekend and into early next week. Significant fire potential is generally low through the period but drops considerably Friday and through the weekend.
